

P4 Pellet Boiler Cascade Control Accessory

Benefits at a Glance:

- The ability of cascading up to four (4) P4 Pellet boilers (up to 800,000Btuh).
- Cycles boilers automatically by service hours.
- Will cycle automatically to the next boiler if there is a malfunction.
- Boilers monitor storage tank with 4 sensors for accurate and precise operation.
- All sensors and controls are connected to the master boiler which saves time in wiring.
- If master boiler fails, an emergency program is activated to maintain a slave boiler at a constant output until the master boiler is reactivated.
